# Numeracy Monday Example

The **vertical axis** represents the number of smarties there are. The **horizontal axis** represents the colour of the smarties. Both axis should be labelled and a graph is always given a title.

What colour smartie was there the most of in the box?

What colour smartie was there the least of?

How many red smarties were there in the box?

How many blue smarties were in the box?

How many smarties were in the box altogether?
